

I hope you will find the information in this newsletter informative and timely. From the completion of the Community Health Needs Assessment and a community meeting we need to reach out and over communicate with the community. We do strive to communicate in as many ways as people would like. If you would like information on what is going on at SRMC and you are not getting it through one of our current means of communication, please let us know. We want the community to have both a clear understanding of what our mission is and how we are striving to meet the mission as well.

Unfortunately, we have had to stop providing Home Health and Hospice in the traditional ways. However, we are reaching out through different programs to help keep people independent and provide support to patients and families during end of life. We are also adding several new services in 2021. We excited to have added Behavioral Health to our offering in September 2020 as we welcome Kristen Rose, LMC to the organization. Stay tuned to see how we are expanding other services in the very near future.

Also, I would like to thank you for your patience as we transition from our old Electronic Medical Record (EMR) to a new and enhanced EMR called EPIC. SRMC will go-live with this new system 10/17/2020. If you have any questions about our new EMR system or new services, please call.

Thank you for trusting us with your healthcare,

Jason Petik, CEO
