

# Pain Management Services Available

## Advanced Spinal Pain Relief

Spinal pain often originates in the neck, mid-back, low back facets or spinal cord. Our team of anesthesiologists and Certified Registered Nurse Anesthetists (CRNA) offer an array of interventional pain relief treatments and services if you have/need:

- Epidural steroid injections
- Sacroiliac joint injections
- Facet injections
- Trigger point injections
- Spinal cord stimulator trials & implants
- Diagnostic nerve blocks
- Botox injections
- Radiofrequency lesioning
- Percutaneous vertebroplasty
- Percutaneous disc decompression
- Implantable pain pumps
- Cervical & lumbar sympathetic blocks
- Discography & more

## Interventional Pain Management

Pain is a problem no matter where it comes from. People may suffer from neck pain, back pain, joint pain, muscle pain, nerve pain (neuropathy), headaches or extremity pain. Cancer patients experience pain, as well. But you don't have to live with it.

Fortunately, not all solutions require taking drugs to cope with it. Our team uses interventional pain management solutions and has experience diagnosing and treating people in pain without pills.

Patients are having outstanding results using a variety of treatment techniques, including:

- Trigger point injections
- Platelet-rich plasma
- RF ablation
- Ultrasound techniques
- Diagnostic nerve blocks
- Celiac plexus blocks
- Implantable pain pumps
- Acupuncture
- Botox for migraines
- Physical therapy
